

### Wild animal warning reflector for a later assembly:

Wild animal warning reflectors make an important contribution for security on roads as well as the protection of humans and animals. Per year average 200.000 wild game accidents with partly high damage to property, people and animal are definitively too much.

Beyond this background wild animal warning reflectors proved as efficient protection. The wild animal warning reflector diverts the light meeting from the vehicle to the rear transverse to the lane, so that an optical warning fence develops, which holds the wild animals back from entering or crossing the street. In order to do not disturb the natural change, this effect enters only if a vehicle approaches.

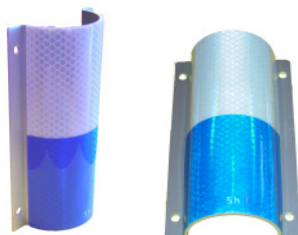

The wild animal warning reflectors for alter assembly are available as wedge-shaped reflector or as semi-circle reflector.

### The wedge-shaped reflector:

- Wedge-shaped wild animal warning reflector in the dimension 184 mm x 81 mm
- Available with universal reflectors in white
- Universal reflector to use variable for sloping-up or sloping-down locations and ground level
- On request reflector available in red (information about area necessary/ no universal reflector)
- Waterproofed and hermetically welded reflectors from plastic
- Thawing salt-resistant and corrosion resistant
- Reflector and housing firmly connected
- Assembly by two screws on the backside of the delineator on height of the normal reflectors (not contained in the scope of supply)

### The semi-circle reflector:

- Aluminum profile with the dimension 150 x 87 x 37mm (in the cross-section D-shaped)
- Upper half of the reflector with white reflection foil (Type 3)
- Lower half of the reflector with blue reflection foil (Type 3)
- The semi-circle profile reflects blue light in every possible angle behind the delineator
- Assembly by four plastic expanding rivets or two screws on the backside of the delineator in height of the black daytime marking (not contained in the scope of supply)
