

ROAD EQUIPMENT > REFLECTORS

„The General“-Wild animal reflector

„The General“-wild animal warning reflector from Beilharz is a real all-rounder, because he combines the advantages of all actual available wild animal warning reflectors. The semi-circle shape guarantees a circulating reflexion and the used plastic reflector assures that the light coming from the vehicle will be diverted transverse to the lane as well as back to the vehicle. Thus an optical warning fence is build which prevents the wild animals from entering or crossing the lane.

» Product features

- One-piece **plastic reflector** on the rear side evaporated with aluminium by high vacuum process
- Reflector available in **light-blue** or **silver-white**
- Structure for **homogeneous light & light flashes**
- Reflector **variable usable** for every location
- Photometric audited by LTI University Karlsruhe
- Flattened **semi-circle shape** with 250mm length – **biggest reflection face** of all wild animal reflectors
- impact-resistant because of the flattened shape
- road-salt-resistant und weather-resistant
- Integrated application or later assembly (plastic housing black) with only one reflector

» Your advantages in an overview

- **Colour:** by the combination of the blue-transparent or transparent body material with rear aluminium evaporation the colours light-blue or silver-white are generated. These colourings guarantee a maximum of reflexion of light and an ideal optical cognition by the wild animals.
- **Horizontal reflexion:** with a horizontal reflexion angle of 120° the whole area on the rear side of the delineator is lightened out; thus a maximum barrier for the wild animal is build.
- **Vertical reflexion:** in the reflector integrated fins create light flashes and compensate slopes and falls from -20° up to $+20^\circ$ in the rear side area. Furthermore the slightly corrugated middle lens assures continuous, homogenous light on ground level.
- **Form:** the flattened, one-piece shape of the reflector with his absolute smooth surface guarantees best self-cleaning effects and a maximum of stability and a small weight of the reflector.
